Address

North Okalapa, Yangon

EDUCATION

Bachelor of Computer Science

B.C.Sc (Computer Science)

2018 - 2026

TECHNICAL SKILLS

Languages

- PHP, JavaScript (ES6+), TypeScript, C#

Frontend

- React.js, Livewire, Alpine.js, Tailwind CSS, Bootstrap

Backend

- Laravel, ASP.NET Core, REST APIs, GraphQL

Databases

- MySQL, MSSQL, MongoDB, Firebase

Cloud & DevOps

- Docker, DigitalOcean, GitHub Actions, Git

PROFESSIONAL SUMMARY

Results-driven Full-Stack Developer with 2+ years of experience building scalable web applications, enterprise systems, and RESTful APIs using Laravel, React.js, ASP.NET Core, and MySQL.

Experienced in secure authentication, RBAC, database optimization, CI/CD pipelines, Docker containerization, and cloud deployment. Proven ability to deliver end-to-end software solutions from requirements analysis and system design to deployment and production support.

Strong problem-solving, analytical, and debugging skills with experience working in Agile environments. Passionate about clean architecture, software quality, and developing reliable, high-performance applications that drive business value.

Working Experience

ITVisionHub Company Limited(Full Stack Developer)

- Engineered scalable web applications using PHP, Laravel, React.js, ASP.NET, and Livewire with a focus on performance and maintainability.
- Architected RESTful APIs and integrated external services to support scalable and modular system design.
- Implemented secure authentication and real-time functionality using Firebase.
- Optimized MySQL queries and database indexing strategies, reducing page response times by approximately 30%.
- Automated deployment processes using GitHub Actions CI/CD pipelines, reducing manual deployment effort and improving release consistency.
- Guided junior developers through mentoring and code reviews, improving overall code quality and team productivity.

Architecture

- MVC, N-Tier Architecture, Domain-Driven Design, CQRS, Event-Driven Systems

Security

- JWT, Sanctum, RBAC, OAuth

Testing

- PHPUnit, Feature Testing, Code Reviews

Automation

- n8n

TOOLS & DEVOPS

- Git
- GitHub
- VS code
- Postman
- CI/CD
- Figma

LANGUAGE

- Burmese (Native Language)
- English (conversational)

GMO Z.com ACE (PHP / WordPress Developer)

- Developed and maintained responsive and user-friendly landing pages using PHP, WordPress, JavaScript, AJAX, HTML, and CSS to support business and marketing requirements.
- Built interactive web features using JavaScript and AJAX.
- Collaborated closely with development and business teams in Japan and Thailand on API integrations, including Mermaid API, to discuss technical requirements, resolve integration issues, ensure accurate data communication, and deliver smooth system integration.
- Created workflow automation solutions using n8n to improve business processes.

PROJECT SUMMARY

Training Management System

This system is a software platform that helps organizations manage their entire training lifecycle — from course planning, scheduling, instructor assignment, student registration, attendance, assessment, and reporting.

Designed and implemented a multi-role Training Management System using Laravel N-Tier Architecture supporting course management, scheduling, attendance tracking, automated grading, and certificate generation.

Implemented RBAC, secure authentication, Dockerized deployment, and scalable database design to support future growth.

Technologies : HTML5, CSS3, Javascript, Bootstrap, PHP, Laravel, MYSQL, Docker, Git & GitHub, N-tier architecture, OOP.

Functionality

- Developed a multi-role authentication system (Admin, Instructor, User) with secure login, registration, and session management.
- Implemented Role-Based Access Control (RBAC) using middleware and policies to manage permissions and secure system access.
- Built end-to-end course management system including course CRUD, scheduling, and timetable management.
- Developed attendance tracking, automated grading, and trainee performance evaluation modules.
- Implemented instructor interest/commission calculation system based on course enrollment and performance metrics.
- Implemented certificate generation system upon course completion and progress validation.
- Built payment and fee management system with invoice generation and payment history tracking.
- Developed real-time admin dashboard with statistical charts for monitoring system activity and performance.
- Designed blog/knowledge-sharing module for training materials and updates.

● Support Ticket Portal

Designed and developed a scalable ticket management platform using React.js and Laravel RESTful APIs, improving support workflow efficiency and system maintainability.

Implemented SLA tracking, role-based access control (RBAC), organization-level ticket segregation, and secure API authentication to ensure structured and secure ticket handling.

Automated the full ticket lifecycle process from creation to resolution, reducing manual handling and improving response consistency.

Built a modular frontend architecture using React Context API and a layered N-Tier backend design to support scalability, reusability, and clean separation of concerns.

○ **Technologies : React.js, Tailwind, Laravel, MYSQL, Docker, Git & GitHub, Redis, N-tier architecture, OOP.**

Functionality

- Developed a multi-role support ticket system supporting Agents and Clients with secure authentication and authorization.
- Implemented Role-Based Access Control (RBAC) to manage user permissions and ticket access levels.
- Built a complete ticket lifecycle management module including ticket creation, assignment, status tracking, and resolution workflows.
- Developed SLA (Service Level Agreement) tracking based on ticket priority to monitor response and resolution times.
- Implemented organization-based ticket handling to separate and manage support requests by organization.
- Created a public comment and internal note system for effective communication and collaboration between support teams and clients.
- Designed and integrated RESTful APIs using Laravel for seamless frontend and backend communication.
- Built a responsive single-page application (SPA) using React.js with React Router and Axios for API integration.
- Implemented secure API authentication using Laravel Sanctum and protected routes with middleware and policies.
- Developed reusable frontend components and state management using Context API / Zustand.
- Designed relational database structures using MySQL for scalable ticket and user management.
- Implemented form validation, error handling, and input sanitization to improve system security and reliability.
- Developed dashboard and ticket filtering features for improved ticket monitoring and workflow management.
- Applied MVC architecture and API-first design principles to maintain clean, scalable, and maintainable code structure.
- Styled responsive user interfaces using Tailwind CSS for modern and user-friendly experience.
